

MSIX(Modern Store Installable eXtended): It is a packaging format for Windows Application essentially enhanced version of Appx.

Structure-Wise, an MSIX package is very similar to an Appx or App-V package. Basically, a zip package that contains your application files and some configuration XML files.

Some Key benefits and features are as follows:

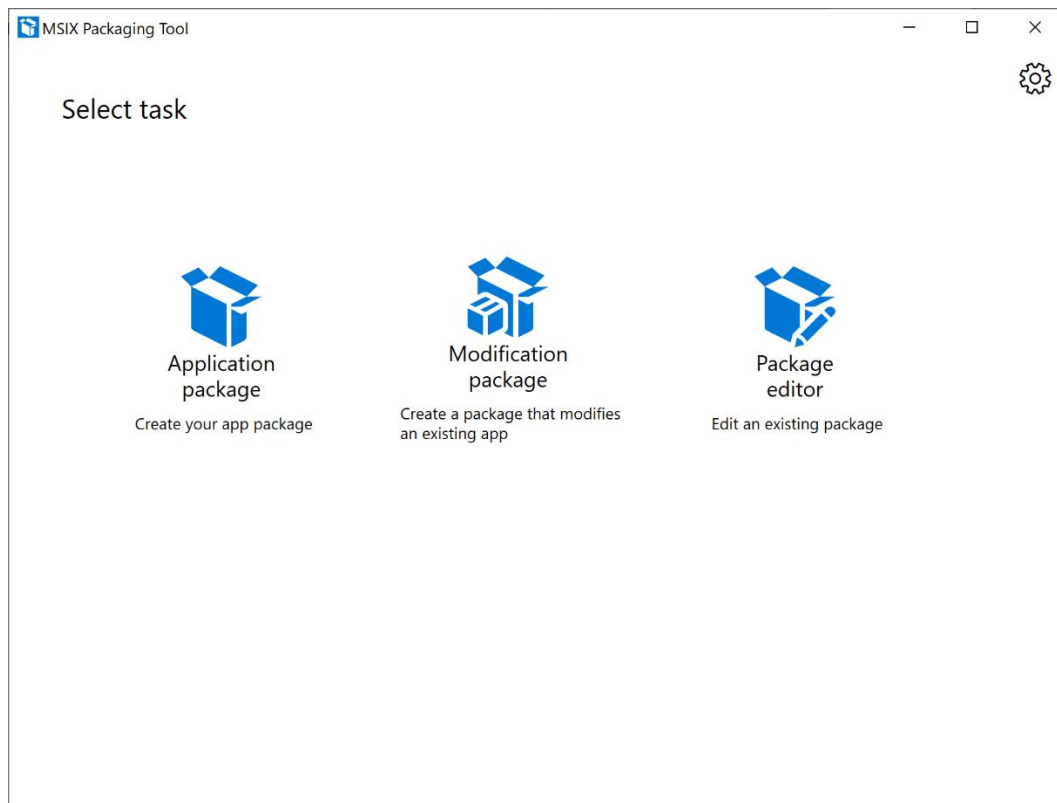

1. **Enhanced Security:** MSIX packages are signed and validated ensuring the integrity of the application and reducing the risk of malicious software.
2. **Efficient Updates:** It provides efficient updates maintaining lower bandwidth usage and deployment time.
3. **Cleaner Installation and Uninstallation:** They have clean installation and uninstallation process.
4. **Support for Different Application Types:** It supports both traditional (Win32) apps and Modern Windows Store
5. **App Attach:** Enabling application isolation and management.
6. **Compatibility:** It is compatible with existing Windows Deployment tools and infrastructure.

Creating a new package using the MSIX packaging tool:

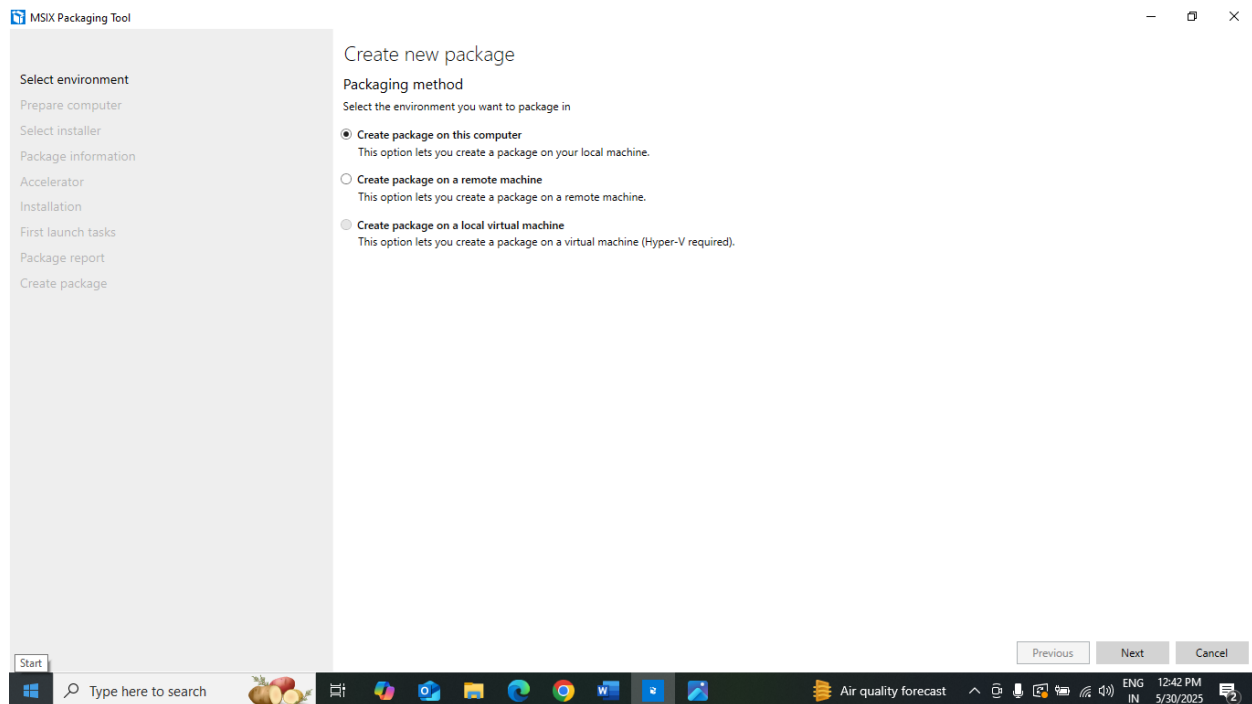

You can use the MSIX packaging tool to create an MSIX application package from any of the following options:

- MSI
- EXE
- ClickOnce
- App-V
- Script
- Manual installation

Step 1: Open the MSIX packaging tool once downloaded from the Microsoft Store

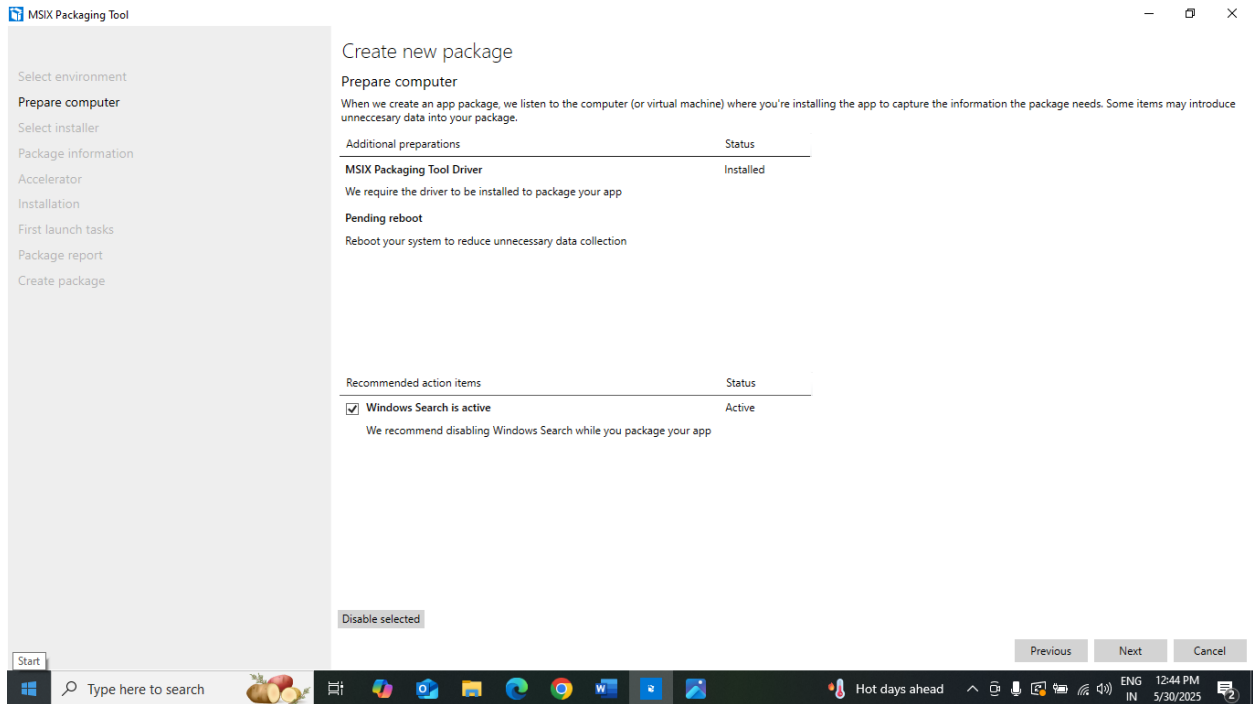

Step 2. Select the Application package option:

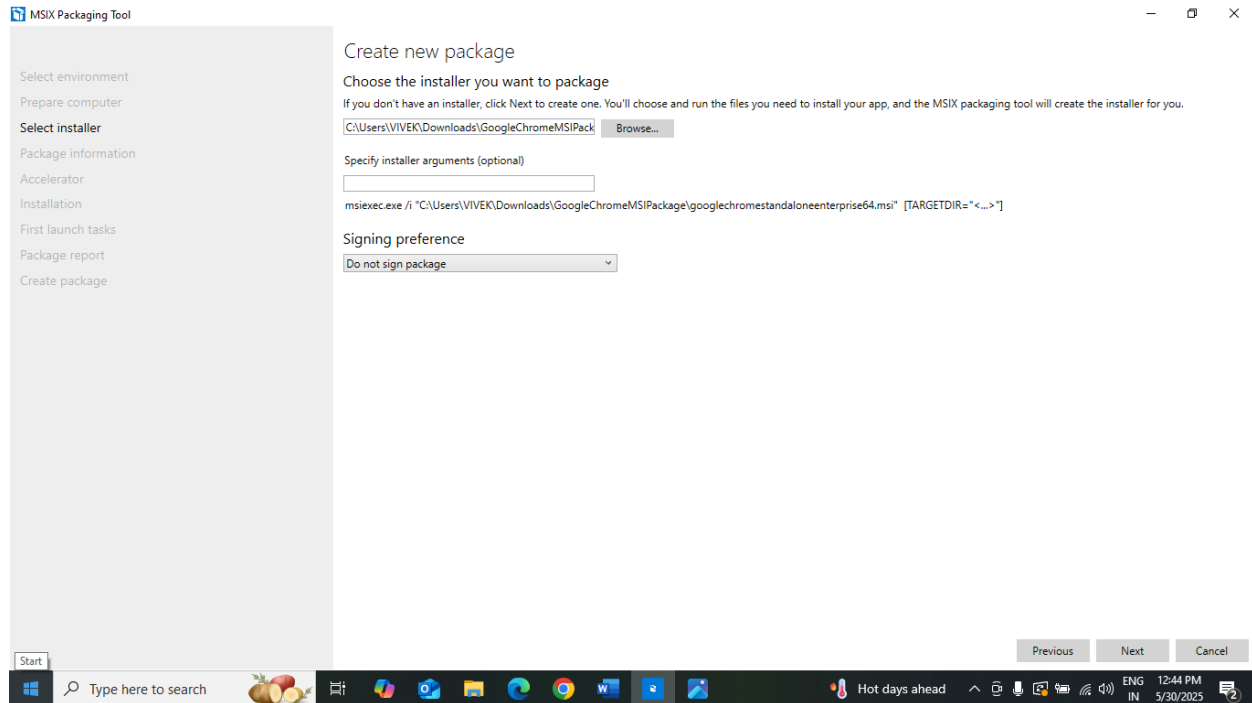

Step 3. In the Prepare computer section, the system will check for the MSIX packaging tool driver.

Step 4. Click on the check box which contains Windows search is Active

Step 5. Then you need to select the installer, Here I am going to select the Google Chrome, and select the signing preference as Do no sign package

Step 6. Afterwards you need to fill out the Package information:

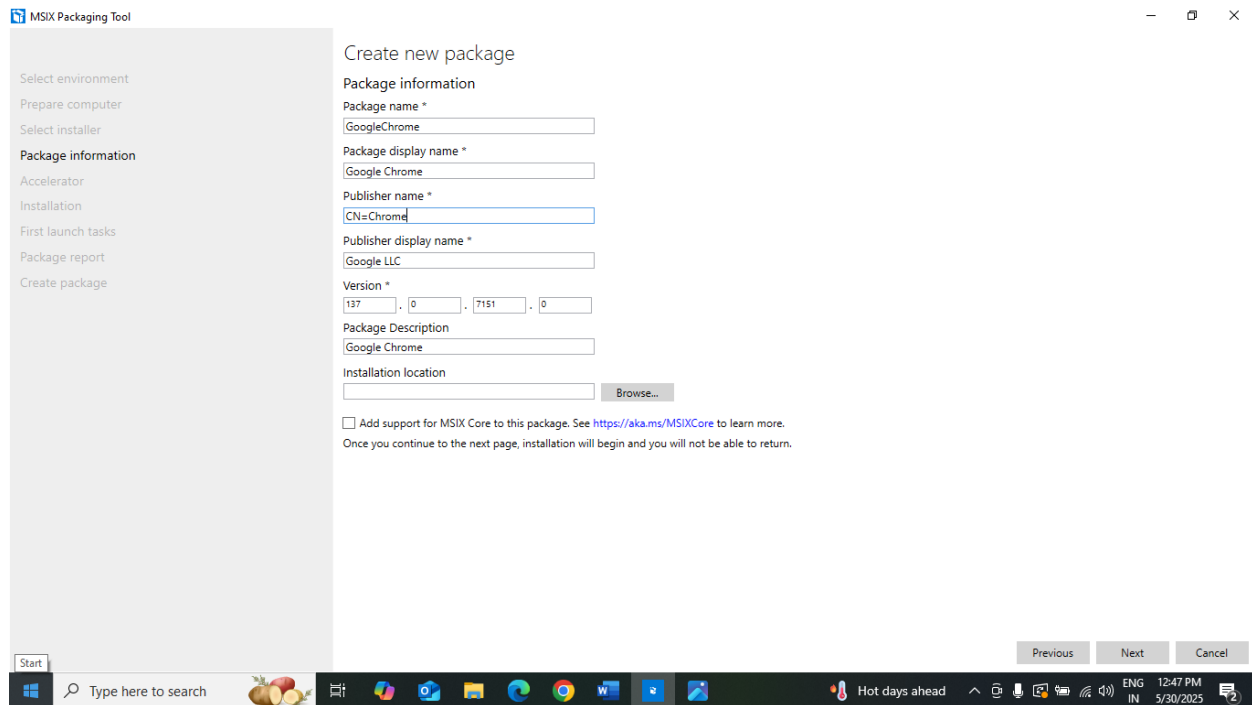

Package Name

DisplayName

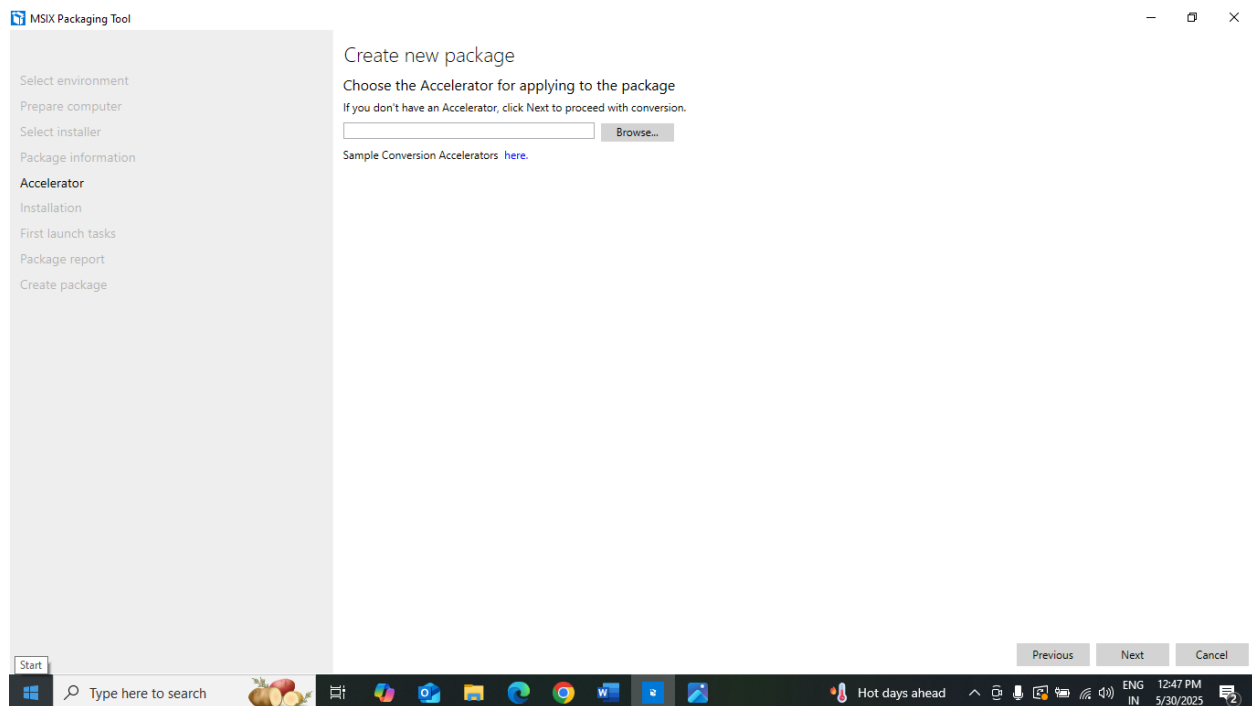

Publisher Name: CN=Chrome

Version= 1.0.0

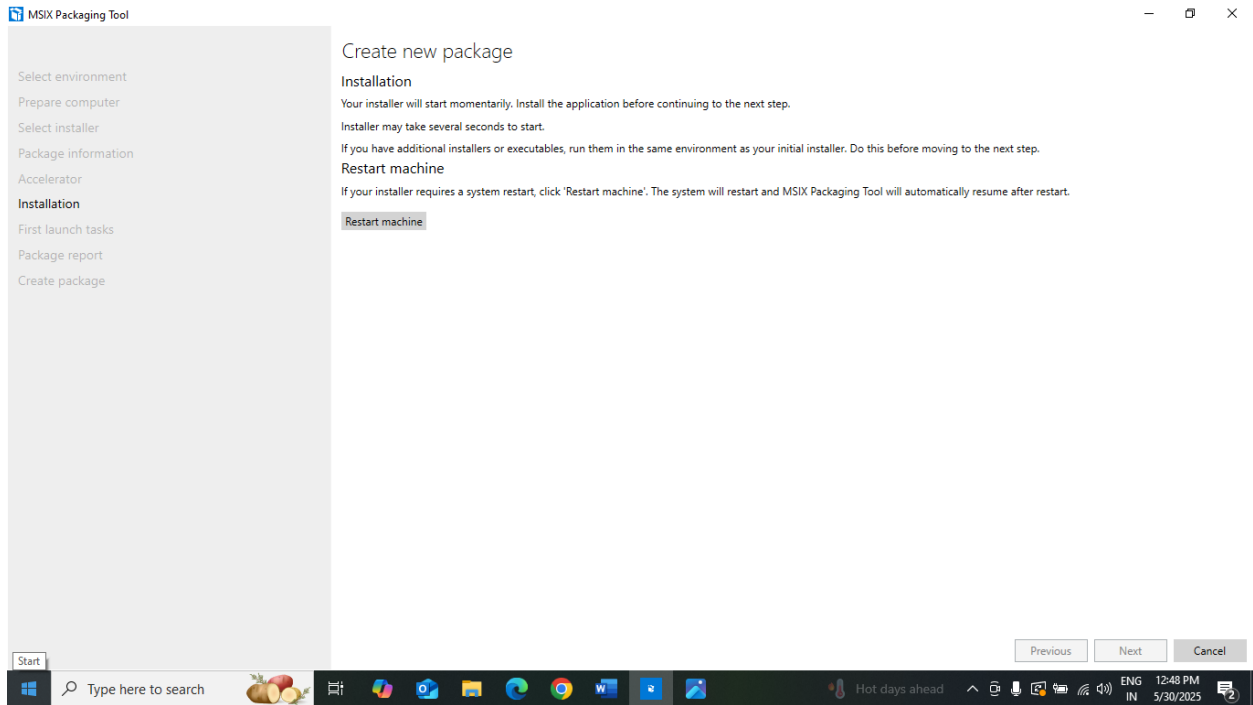

Description

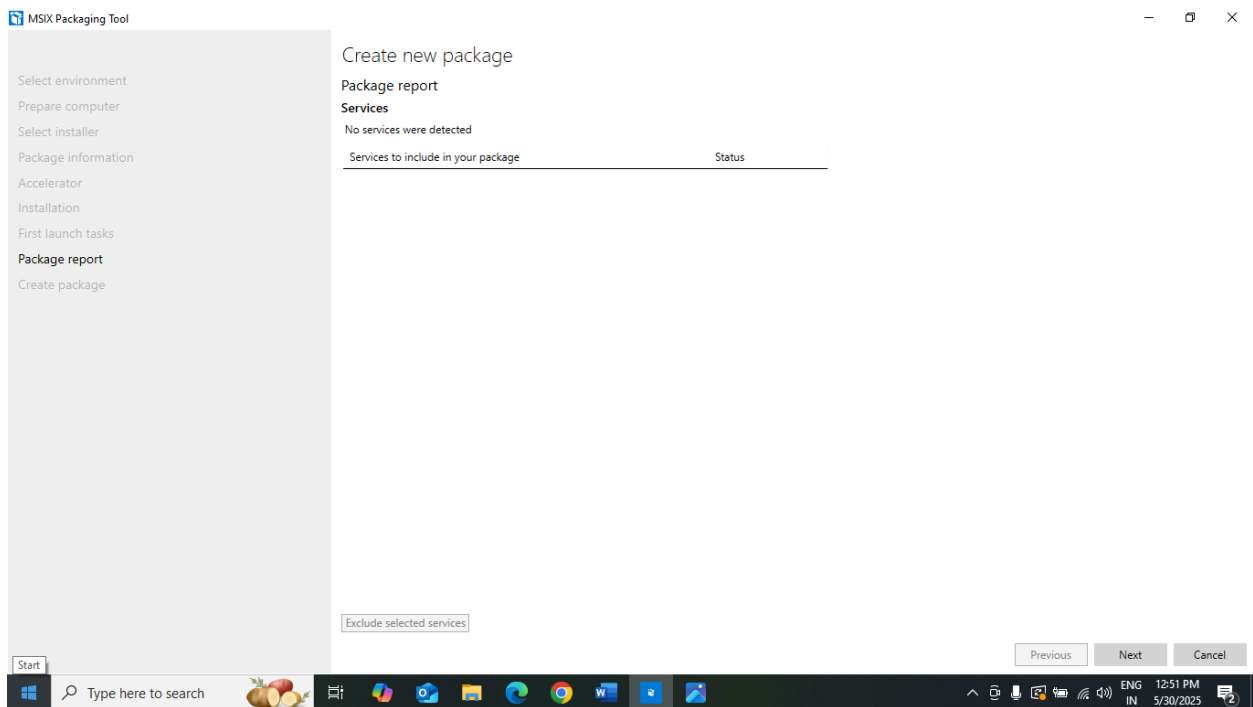

Step 7. If you have an accelerator, you can select one, if not then you can select the next button.

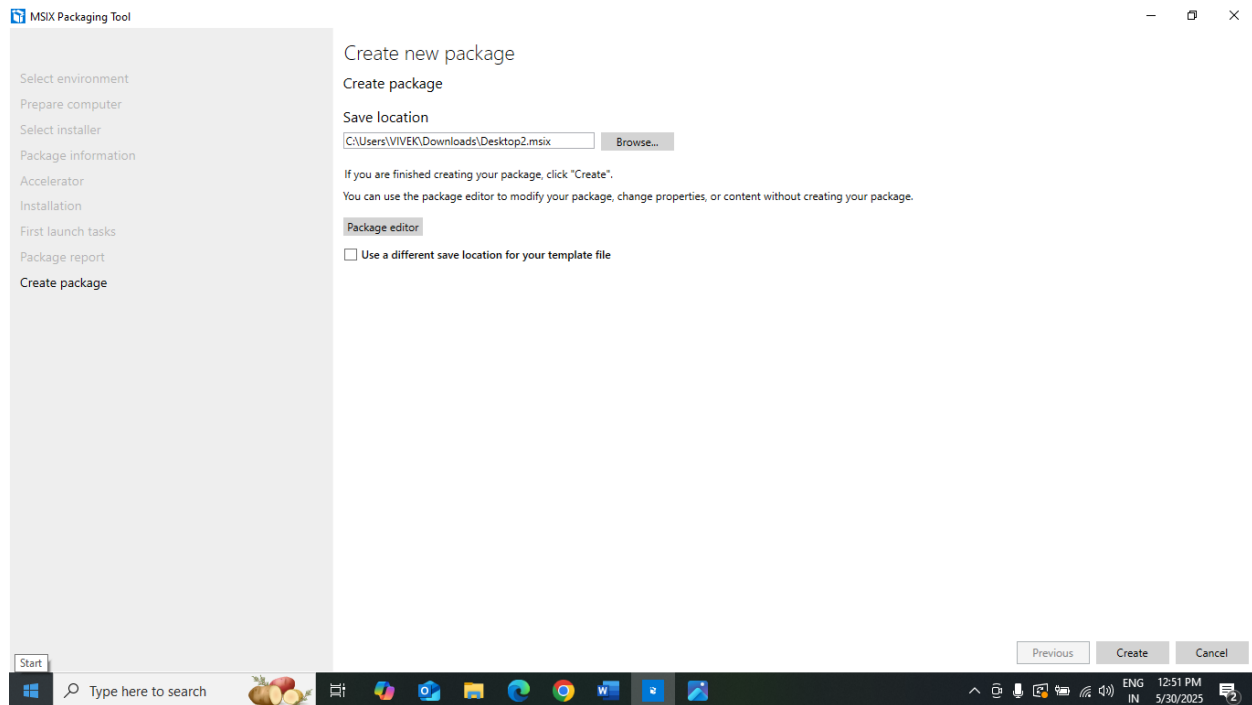

Step 8. Once the installation is complete, you can select the first launch tasks. Here I am not going to select anything and just click on Next.

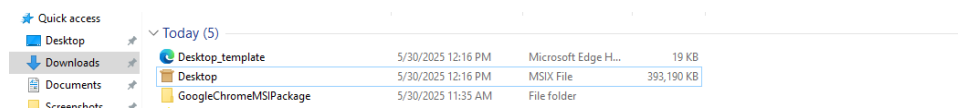

Step 9. In the create package section you need to specify a path.

Step 10. Click the create button.

Your application will be packaged and found in the path you have specified.

So, this is how you can create a package using the MSIX packaging tool.
