

Microsoft Intune:

Provides cloud-based infrastructure for Mobile device management (MDM) and cloud-based Mobile Application management (MAM) and cloud-based PC management.

When you open the Microsoft Intune admin center, the service is displayed in a pane of your browser. Some of the first workloads you may use in Intune include **Devices**, **Apps**, **Users**, and **Groups**.

From the navigation pane, select **Dashboard** to display overall details about the devices and apps for your Intune tenant.

Step 1: Sign in to Intune Admin Center

- Go to: <https://endpoint.microsoft.com>
- Sign in with your **admin account** (with Intune or Microsoft 365 admin rights).

Step 2: Assign Licenses

- Go to **Microsoft 365 Admin Center > Users > Active Users**.
- Select a user → **Licenses and Apps** → Assign **Intune license**.

Step 3: Create User or Device Groups

- In Intune: **Groups > New Group**
- Choose type: **Security group**
- Add members (users or devices)
- These groups will be used to assign apps and policies.

Step 4: Configure Device Enrollment

- Go to **Devices > Enroll devices**:
 - **Windows**: Enable automatic enrollment via Azure AD.
 - **iOS/Android**: Set up MDM push certificate (iOS) or Android Enterprise.
- Configure **enrollment restrictions** (e.g., block jailbroken devices).

Step 5: Create Compliance Policies

- Go to **Devices > Compliance policies > Create policy**

- Select OS (Windows, iOS, etc.)
 - Define rules (e.g., require PIN, encryption, up-to-date OS)
 - **Assign** to user/device groups
-

Step 6: Create Configuration Profiles

- Go to **Devices > Configuration profiles > Create profile**
 - Choose platform and profile type (e.g., Security baseline, custom)
 - Configure settings (BitLocker, password rules, Wi-Fi, VPN)
 - **Assign** to groups
-

Step 7: Add and Deploy Apps

- Go to **Apps > All apps > Add**
 - Select app type:
 - **Microsoft 365, Win32**, iOS store app, Android APK, etc.
 - Configure install settings and **assign to groups**
-

Step 8: Set Up Conditional Access

- Go to **Azure AD > Security > Conditional Access**
 - Create policy:
 - Assign users
 - Target cloud apps (e.g., Teams, Outlook)
 - Grant access **only if the device is compliant**
-

Step 9: Monitor Devices & Compliance

- Go to **Devices > Monitor** to see:
 - Device compliance
 - Deployment status
 - Device health and alerts
-

Step 10: Take Action on Devices

- From **Devices > All devices**, you can:
 - **Wipe, Retire, Remote lock**, or **Reset passcode**
 - View device logs and actions

The Steps for Microsoft Intune Deployment are as follows:

1. **Setup Intune:** Get the license to begin with Microsoft Intune. Confirm your devices are supported, create your Intune tenant, add users & groups, etc.
2. **Add and Protect apps:** Decide which application is necessary for the users.
3. **Check for compliance and turn conditional access:** Define what a “secure” “healthy” and set protection rules for them.
4. **Configure device features and security:** Apply settings like Wi-Fi, VPN etc. to devices. When enrollment starts, the device configuration profiles are automatically assigned. When enrollment completes, these device and security features are configured.
5. **Enroll devices:** Connect user’s devices to Intune so they are managed and secured. To fully manage devices that one enrolled in Intune to receive compliance and conditional access policies, device configuration policies and security policies you create. When a device is enrolled, the device receives a MDM certificate. This is used to communicate with Intune service.
